MAKE LIFE EASIER WITH MYWEB

NEW

MAKING YOUR LIFE EASIER - IT IS MORE THAN JUST BEING ABLE TO ORDER ONLINE. MYWEB IS FOUNDED ON OUR CORE CAPABILITIES AND EXPERIENCE IN GARMENT MANAGEMENT. THE MYWEB SYSTEM FUNCTIONALLY BRINGS THIS KNOWLEDGE RIGHT TO OUR CLIENT'S FRONT DOOR AT EVERY LEVEL.

THE FULL BENEFITS OF THIS ONLINE ORDERING SYSTEM ARE NUMEROUS:

- The ability to only show approved products as selected by Health & Safety Department.
- The ability to restrict colours and type of garments with company logos to those selected by your marketing department.
- Keeping consistency of your corporate image.
- Full visibility of stock levels.
- Budget control is available, restricting order value to levels selected by your finance department. Orders above budget level can be authorised by senior managers.
- Authorisation approval for order if required.
- Full order history and reporting is available 24/7 and more..

FIVE SIMPLE STEPS

TO CREATING YOUR CUSTOM MADE COMPANY UNIFORM

STEP ONE
Choose your style!
Polos, t-shirts, sweatshirts and rugby shirts.

STEP TWO
Select your design options. For cuffs, collars, sleeves, body, hem and pockets.

STEP THREE
Decide your colour combinations. Up to 19 standard colour options plus pantone colour matching for quantities over 250 per style.

STEP FOUR
Choose your branding type. From quality embroidery to flexible transfers, we can offer a range of finishes.

STEP FIVE
Call us on 01752 266374 now for a free no obligation consultation or email sales@protectivewearuk.com with your enquiry.

CREATE YOUR OWN CUSTOM COLOUR GARMENTS

For a minimum of 250 pieces per style we can pantone match fabric to your specified colour.

PRINTING AND EMBROIDERY

We use the highest quality printing and embroidery equipment to ensure we accurately represent your logo and branding. The resulting finish is second to none.

LOW GARMENT ORDERING QUANTITIES

For standard colour options we can manufacture quantities as low as 100 items per style and 5 items per size with no maximum volume limits.

RAPID SAMPLE GARMENT

The design of your choice using standard stock colour fabrics will be with you to evaluate within 12 working days.

FAST DELIVERY TIMES

Short lead times using our specialist manufacturer in Europe, which was specifically set-up for bespoke manufacturing.

OEKO-TEX APPROVED MATERIALS

OEKO-TEX ensures skin friendly garments using materials and components that are free from harmful chemicals and substances.

ETHICAL SOURCING

Manufactured in Europe in accordance with all current European labour regulations, controlling working conditions for employees.

HIGHEST QUALITY

Focused on top-end design and materials, and always employing noble fabrics with excellent finishing. Our manufacturing plant has been manufacturing garments for over 20 years.

EN STANDARDS

EN ISO 20471:2013 High Visibility Clothing

There are three classes of high visible garment based on the total area of fluorescent material and retro-reflective tape.

CLASS 1 Minimum level of protection required for any persons working on a private road or to be used in conjunction with a higher classed garment. Must incorporate a minimum of 0.14 m² of background material and 0.10 m² of retroreflective material. (2 metres of 5 cm wide reflective tape).

CLASS 2 Required for any persons working on or near A and B class roads, also for delivery drivers. Must incorporate a minimum of 0.50 m² of background material and 0.13 m² of retro-reflective material. (2.60 metres of 5cm wide reflective tape).

CLASS 3 Highest level of protection - required for any persons working on or near motorways, dual-carriage ways or airports. Must incorporate a minimum of 0.80 m² of background material and 0.20 m² of retroreflective materials. (4 metres of 5cm wide reflective tape).

* Trousers must be worn in conjunction with the jacket.

RIS-3279-TOM Rail Industry Standard for High Visibility Clothing

RIS-3279-TOM Issue 1 has replaced GO/RT 3279. Railway Industry Standard (RIS) sets out the minimum specification for high visibility warning clothing in the Rail Industry.

EN 14116 Protective Clothing: Protection against Heat and Flame - Limited Flame Spread materials, material assemblies and clothing

This standard intends to protect workers against occasional and brief contact with small igniting flames in circumstances where there is no significant flame hazard and without the presence of another type of heat.

Index 1 - garments should not be worn close to the skin

Index 2 & 3 - garments can be worn close to the skin

EN 343 Class 3:3 Waterproofness and Water Vapour Resistance

EN343 Is the European Standard that specifies requirements and test methods applicable to the materials and seams of protective clothing against the influence of precipitation e. g. rain, snowflakes, fog and ground humidity.

Waterproofness and water vapour resistance are the essential properties to be tested.

There are 3 classes of waterproof level; Class 3 being the highest level of waterproof protection.

There are 3 classes of breathable level; Class 3 being the highest level of breathable protection.

PROGARM® CLOTHING

PROGARM® CLOTHING

There is no goal more important than to offer garments that provide the ultimate protection from risks and hazards in which the wearers have to work.

With this in mind, ProGARM® has developed a reputation for innovative Flame Resistant Garments in designs and fabrics that workers want to wear.

Each product is the result of extensive in-house development in addition to feedback from end users about the features needed to set a good garment apart from the bad.

Every detail of a ProGARM® garment is carefully considered – from the super soft VXS+ fabric offering comfort previously unheard of in Flame Resistant fabrics to the zippers, the reflective tapes and even the threads. ProGARM® is the brand you and your workforce need for consistent, reliable protection day-in and day-out.

- Mandarin Collar - maximum neck protection
- Kneepad pockets - wear with kneepads for extra comfort
- Chest Pockets with zippers - secure storage

FOOTWEAR FEATURES

Product Code Guide

Category	Description	Application
Leather and Other Materials (not rubber/polymeric)		
SB	Safety basic requirements Toe cap only	All safety footwear should have toe protection. No risk to damage under foot
S1	Fully enclosed heel Antistatic properties Energy Absorption in the seat area (heel)	Indoor environments where they will not be exposed to rainwater or outdoor elements.
S2	As S1 plus Water penetration and absorption resistance	
S3	As S2 plus Penetration resistant midsole	Most commonly specified standard for industry.
All Rubber or All Polymeric (entirely moulded) Footwear, e.g., Wellingtons		
S4	Antistatic properties Energy Absorption in the seat area (heel)	
S5	As S4 plus Penetration resistant midsole	S5 styles are used in areas where there is a constant presence of water or liquids.
Slip Resistance		
SRA	Any product which has been tested on a ceramic tile wetted with dilute soap solution.	Footwear that has been rated as SRA should be worn in environments where there is a low chance of slip.
SRB	Any product that has been tested on smooth steel with glycerol.	If a product passes the SRA test, it can be tested to SRB rating, once it has achieved both, it becomes SRC.
SRC	Any product that has been tested under both the above conditions.	SRC rated footwear will give the best chance of preventing a slip, trip or fall. However, it is important to, design out the risk, wherever possible.
Additional Features		
P	Penetration Resistant Midsole	Midsole protection can guard against nails and other sharp protrusions.
HI	Heat Insulation	Offers enhanced protection in challenging, hot environments.
CI	Cold Insulation	Offers enhanced protection in challenging, cold environments.
WR	Water Resistant	Can be worn in outdoor environments exposed to sustained wet weather and not leak.
M	Metatarsal Protection	Commonly found in traffic management, or places where heavy objects are hand carried, such as breweries etc.
HRO	Heat Resistant Outsole	Can be used in close proximity to hot surfaces such as freshly laid tarmac.
ESD	ESD Compliant footwear is used to prevent damage to electronic components via an Electrostatic discharge.	Used in electronics manufacturing processes to ensure the control of electrostatic levels.

EN ISO 20345:2011

This is the standard which all styles that are classified as 'safety footwear' are tested to in Europe.

EN STANDARDS

The Personal Protective Equipment at Work Directive 89/656/EEC requires employers to provide their employees with suitable Personal Protective Equipment (PPE) to carry out their work. Protective gloves are classed as PPE and must therefore be CE marked to indicate approval to the relevant standard. There are different standards to which a glove can be tested which reflect the hazard for which the glove is designed to protect against. Below is a brief explanation of these standards.

EN388:2016 Protective Gloves Against Mechanical Risks

This standard tests a glove against mechanical hazards such as abrasion, blade cut, tear and puncture. EN388: 2016 updates the existing standard (2003) with a new test method for abrasion, blade cut & impact resistance tests. A score of X means that the test was not carried out.

EN 388:2003	A	Abrasion Performance	Index 0 – 4
	B	Blade Cut Performance	Index 0 – 5
	C	Tear Performance	Index 0 – 4
EN 388:2016	D	Puncture Performance	Index 0 – 4
	E	Straight Blade Performance	Index A – F
	P	Impact Performance	P

EN407:2004 Protective Gloves Against Thermal Risks

This standard tests a glove against a variety of heat related risks. In order to claim EN407 approval a glove must pass at least one of the heat tests. It is not compulsory to take all the tests. A score of X means that the test was not carried out.

EN 407 ABCDGF	A	Flammability Performance	Index 1 – 4
	B	Contact Heat Performance	Index 1 – 4
	C	Convective Heat Performance	Index 1 – 4
	D	Radiant Heat Performance	Index 1 – 4
	F	Small Molten Metal Splash Performance	Index 1 – 4
	G	Large Molten Metal Splash Performance	Index 1 – 4

EN511:2006 Protective Gloves Against Cold Risks

This standard tests a glove against cold handling risks.

EN 511 ABC	A	Convective Cold Performance	Index 0 – 4
	B	Contact Cold Performance	Index 0 – 4
	C	Water Permeability	Index 0 – 1

EN374:2003 Protective Gloves Against Chemicals and Micro-Organisms

EN 374-2

Level 3

EN 374-3
A K L

Gloves are tested against twelve test chemicals (A – L). In order to claim approval to EN374 (and display the pictogram) a glove must achieve a breakthrough time >30 minutes against a minimum of three of the test chemicals. The test chemicals that the glove has passed against are then shown under the pictogram.

EN374:2016 Protective Gloves Against Chemicals and Micro-Organisms

EN374: 2016 updates the existing standard introducing three new types with new markings and adding a further 6 chemicals, highlighted in the table below.

Type	Minimum Performance Level	Minimum number of chemicals tested
A	2 (min 30 minutes breakthrough)	6
B	2 (min 30 minutes breakthrough)	3
C	1 (min 10 minutes breakthrough)	1

EN 374:2016

EN 374:2016

EN 374:2016

CHEMICAL	CAS NO.	CLASS
A Methanol	67-56-1	Primary alcohol
B Acetone	67-64-1	Ketone
C Acetonitrile	75-05-8	Nitrile compound
D Dichloromethane	75-09-2	Chlorinated paraffin
E Carbonyl disulphide	75-15-0	Sulphur containing organic compound

ATG[®] GLOVES

Focused on innovation and quality, ATG[®] designs, develops and manufactures gloves that enhance the performance of the most sophisticated tool: the hand.

ATG[®] stands for value for money, quality, innovation, enthusiasm and a sense of competitive challenge.

Designed and developed to be the lightest, fully breathable coated glove, MaxiFlex[®] Elite™ completely rewrites the rules. Weighing in at a staggering 36% less and 30% thinner than traditional foam nitrile gloves MaxiFlex[®] Elite™ delivers a user experience that sets game changing new standards.

AD-APT[®] works to regulate your hand temperature to keep hot hands cool and sweaty hands dry thanks to the use of ATG[®]'s integrated anti-perspirant within the glove.

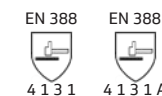

protectivewearuk.com

MAXICUT®/WP
CUT 3

APPLICATIONS

- Handling ceramics
- Corrugated sheets
- Non-deburred parts, glass panels, plastics injection
- Moulds, sharp edged metal sheets, small sharp components
- Logistics and warehousing
- Maintenance
- Primary, secondary and final assembly

CODE	34-304
Coating:	Palm
Colour:	Grey/Black
Liner:	Green
Sizes:	7 to 11
Length:	Wrist
Palm thickness:	1.05 mm
EN388 2003:	4331
EN388 2016:	4331B
Silicone free:	No

APPLICATIONS

- Cut resistant work glove for Assured Protection™ in oily or wet environments
- Can be used to protect against contact heat up to 100°C for 15 sec
- Not to be used for protection against naked flames

CODE	34-450LP
Coating:	Palm coated knitwrist/Leather pad
Colour:	Green/Grey
Sizes:	7 to 10
Length:	24 cm
Palm thickness:	2.50 mm
EN388 2003:	4332
EN407:	X2XXXX
Silicone free:	No

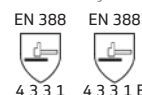

MAXICUT® DRY WITH
LEATHER PALM

MAXICUT®/WP
3/4 DIPPED CUT 3

APPLICATIONS

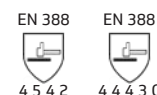

- Handling ceramics, corrugated sheets, non-deburred parts, glass panels, plastics injection
- Moulds, sharp edged metal sheets, small sharp components
- Logistics and warehousing
- Maintenance
- Primary, secondary and final assembly

Box:	50

Place your right hand palm down on the drawing, your index finger aligned with the start of the turquoise bar. Your glove size is the number on the RIGHT of the grey line just showing or just beneath your hand.

5 6 7 8 9 10 11 12

EN420 Sizing requirements

Glove size	Palm circumference	Palm length	Total minimum length of glove
5	127 mm	148	210
6	152 mm	160	220
7	178 mm	170	230
8	203 mm	182	240
9	229 mm	192	250
10	254 mm	204	260
11	279 mm	215	270
12	304 mm	227	280

Determining and wearing the correct size of glove for your hands is essential in order for the glove to perform optimally.

For maximum dexterity and comfort, the glove must be neither too loose fitting, leading to imprecise handling; nor too tight, causing discomfort and restricting movement.

For the ideal form, fit and feel, you can use the guide below to help determine the size you require.

GLOVE SIZING SYSTEM

EN STANDARDS

ATTENUATION VALUES

SNR=32dB H=35dB M=30dB L=22d

PRODUCT STANDARDS

Ear muffs are tested to the relevant European Standards and are CE marked.

EN 352 Part 1 Ear muffs

EN 352 Part 3 Helmet mounted ear muffs

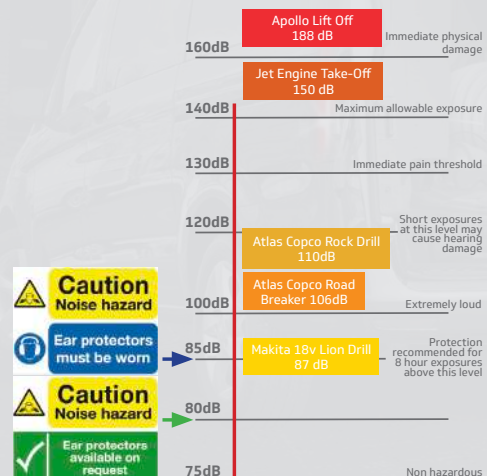

EN 352 Part 4 Level dependent ear muffs

These Regulations require all employers to assess the risks from the noise exposure at work and where appropriate, provide suitable and sufficient hearing protection for each employee exposed to noise at or above the lower action value.

The SNR is the number of potential decibels the hearing protection will reduce the noise level by once you have established the total noise if fitted correctly. If using the SNR to establish which hearing protector is suitable, it can be done by subtracting the SNR from the actual noise being produced. For example, if the noise level in a particular environment has an A weighted noise measurement of 110dbA, the hearing protection has an SNR of 30db, when wearing the hearing protections in the same environment the noise level will be reduced to 80db.

The importance of wearing hearing protection really only becomes apparent over a period of time, so assessing and wearing the correct hearing protection for your particular environment will minimize the risk of an individual losing their ability to hear properly in the future.

The exposure limits shown to the left are taken from regulation 4 of The Control of Noise and Work Regulations 2005, which are in turn based on a European Directive.

EAR PROTECTION

143

EN STANDARDS

EN 149: 2001

This is the standard for disposable respirators- filtering face pieces against particles, amended in 2009.

FFP - Filtering Face Piece + 1, 2 or 3 (efficiency: low, med, high)
R - reusable
NR - not reusable (single shift)

Assigned Protection Factor (APF)

This is the level of protection a respirator can be expected to provide if it is functioning properly and the user is wearing it correctly. APF is scored via a number, allowing users to gauge how much contaminant they are expected to inhale while wearing the respirator.

EN 12941

This European standard specifies minimum requirements for powered filtering devices incorporating a helmet or a hood with gas, particle or combined filter(s) for respiratory protection. It does not cover

- devices designed for use in the oxygen deficiency environments (oxygen less than 17% by volume).
- respiratory protective devices designed for escape purposes as well.

There are 3 classifications: TH1, TH2 and TH3.

EN 12942

This European standard specifies minimum requirements for power assisted respiratory protective devices which incorporate a full face mask, half mask or a quarter mask together with gas, particle or combined filter(s). It must protect the user even if the PAPR is off. The same exclusions apply as outlined above for EN 12941.

There are 3 classifications: TM1, TM2 and TM3.

Nominal Protection Factor (NPF)

This is the theoretical level of protection of respiratory protective equipment calculated using performance data measured in the laboratory.

DESCRIPTION/ DEVICE	CLASS	NPF	APF
PAPR with helmet or hood EN 12941	TH1	10	5
	TH2	50	20
	TH3	500	40
PAPR with half or full face mask EN 12942	TM1	20	10
	TM2	200	20
	TM3	2000	40

EN 60529

EN 60529 (British BS EN 60529:1992, European IEC 60509:1989). classifies the different levels of protection that an electrical enclosure can provide from solids and liquids as an IP rating.

The first numeral is for solids and the second for liquids. Zero stands for no protection. An X signifies that no testing has been carried out.

EN 14594

This European standard specifies minimum requirements for continuous flow compressed air line breathing apparatus and a hood or a mask. Apparatus is graded from 1A to 4B

EN 143

This standard pertains to the particle filters used as components in unassisted respiratory protective devices. Based on their efficiency, particle filters are divided into three categories:

- P1 – low filtration, intended for use against solid particles only
- P2 – medium filtration, subdivided according to the filters' capacity to remove both solid and liquid particles or solid particles only
- P3 – high filtration, subdivided as P2.

EN 14387

This details the minimum requirements for gas filters or combined filters intended for use within a respiratory protective device.

This primarily covers the classification of filters into various types (e.g. A, B, E, and K) as well as categories (e.g. Filter classes 1, 2 and 3).

EN 136

This standard specifies the minimum requirements for full face mask respiratory protective devices. It covers three types of full-face masks; all provide the same level of respiratory protection but have differences in terms of their applications:

- CL 1: full mask for light duty
- CL 2: full mask general use
- CL 3: full mask for special use

Requirements include temperature stability, impermeability, and concentration of carbon monoxide, breathing resistance, speech diaphragms, and field of vision.

A mask is a full face piece that covers the eyes, nose, mouth, and chin and that provides the wearer with respiratory protection in the form of an appropriate seal against specific atmospheric conditions and airborne hazards.

EN 166

This is the European standard covering the requirements for protective eyewear.

EN 397

This standard sets out the performance and marking requirements for all PPE Helmets.

//SHORT PROTECTIVE HOOD
CA-1+

//CLEANAIR®BASIC

A NOTE ON FACIAL HAIR

Many masks rely on a good seal against the face so that, when you breathe air in, it is drawn into the filter material where the air is cleaned. If there are any gaps around the edges of the mask, 'dirty' air will pass through these gaps and into your lungs. It is therefore very important that you put your mask on correctly and check for a good fit every time.

Facial hair – stubble and beards – make it impossible to get a good seal of the mask to the face.

If you are clean-shaven when wearing tight-fitting masks (ie those which rely on a good seal to the face), this will help prevent leakage of contaminated air around the edges of the mask and into your lungs. You will therefore be breathing in clean air, which will help you stay healthy.

If there are good reasons for having a beard (eg for religious reasons), alternative forms of RPE, that do not rely on a tight fit to the face, are available.

SHORT PROTECTIVE HOOD CA-1 / CA-1+

This short light hood is an optimal solution for respiratory protection and face protection in dusty and light chemical environments where no further mechanical protection is required. In combination with PAPR or airline systems CleanAIR® it reaches the highest level of respiratory protection.

- Perfectly fits various head types due to adjustable headgear and comfortable elastic rubber band
- Distance of the visor can be set individually, as well as the perimeter of the headgear
- Light nylon fabric and spacy cut makes it pleasant to wear even for long time work
- Wide panoramic visor with antifog coating ensures undisturbed view and provides basic mechanical protection of the eyes

> SEE PAGE 179 FOR THE FULL RANGE

The full face mask Shigematsu GX02 uses a double seal flange which provides maximal seal while keeping a high level of comfort for the wearer.

- Wide panoramic visor
- Speech diaphragm facilitates communication.
- Specially treated exchangeable polycarbonate visor guarantees high scratch resistance.
- Mask body is made from high quality silicone which guarantees high resistance and a long operation life.
- Six point head harness ensures secure and easy fit.
- Standard connection thread RD40×1/7"
- Two exhalation valves for low breathing resistance
- Weight: 610 g

AREAS OF APPLICATION

- Chemical industry
- Laboratories
- Building industry
- Remediation operation

The Shigematsu GX02 Full Face Mask can be used for asbestos removal when used in conjunction with Chemical 2F. See page 156.

> SEE PAGE 179 FOR THE FULL RANGE

BRANDED UNIFORM DISPOSAL

Corporate identity theft is rising rapidly in this country. Are you aware of the damage this can do to your company image and reputation?

Branded clothing is regularly disposed of through normal waste collection methods or through charity schemes. However this method of disposal is open to abuse where clothing is either sold or stolen and worn in criminal activities to gain authenticity. Throughout this activity your company name is clearly displayed. These incidents are then often advertised through local or national press resulting in very negative publicity associated with your company.

Environmental Responsibility

Larger companies look for green credentials when selecting suppliers to work with. Clothing currently is mostly sent to landfill to be disposed of; this is not environmentally friendly, besides landfill site capacity is reducing and waste is having to be transported further distances adding to the environmental damage.

We Have The Solution

In order to meet the need of both secure and environmental clothing disposal, we have negotiated the ultimate solution that:

- Destroys branded uniform by shredding
- Recycles the material in to acoustic insulation where possible
- Provides Certificates of Destruction
- Offers a collection service of redundant uniform

This service is available now for the follow items of clothing:

- Trousers, jackets & skirts
- All t-shirts, shirts & blouses
- Coveralls
- Fleeces & softshells
- All hi vis garments

EN STANDARDS

EN 397: 2012 Industrial Safety Helmets

This standard sets out the performance and marking requirements for all PPE Helmets. The protection provided to the wearer is against falling objects, which could cause brain or skull injury.

Mandatory Tests

Impact
Penetration
Flammability (F)

Optional Tests

EN 12492 Specialist Mountaineers Helmets

This includes standards on helmet retention to ensure the helmet is not inadvertently removed as well being applicable to wearers working at height.

EN 50365: 2002 Insulating Helmets for use on Low Voltage Installations

This standard is for helmets used for working live or close to live parts on installations not exceeding 1,000 V a.c. or 1,500 V d.c.

EN12899-1 Ra2 Reflective Stickers

This standard deals with the reflective performance of hi-vis stickers applied to helmets.

WORKPLACE FIRST AID STANDARDS

BS 8599-1: 2011 Workplace First Aid Kits

This standard published by the British Standards Institute specifies the contents of workplace first aid kits. The size of the first aid kit required is a combination of the level of risk and the number of employees in the workplace

Low risk environments include offices, libraries, shops etc.

High risk workplaces include engineering, processing, warehousing, construction and manufacture.

The Health and Safety (First-Aid) Regulations 1981

HSE kits have a filling which complies with the HSE recommendations.

The decision on what to provide will be influenced by the findings of the first-aid needs assessment.
